Better Practices for Public Sector Transformation

Public Service Delivery Index in Africa (PSDI), and System Tools

Dr. Njeri WABĪRI
African Development Bank
n.wabiri@afdb.org

Outline Better Practices for Public Sector Transformation

Context (1a) Public Sector Performance in Africa

- ❑ Achieved 45.39 overall
- ❑ Opportunities for scaling and targeted investments for an optimized public service system

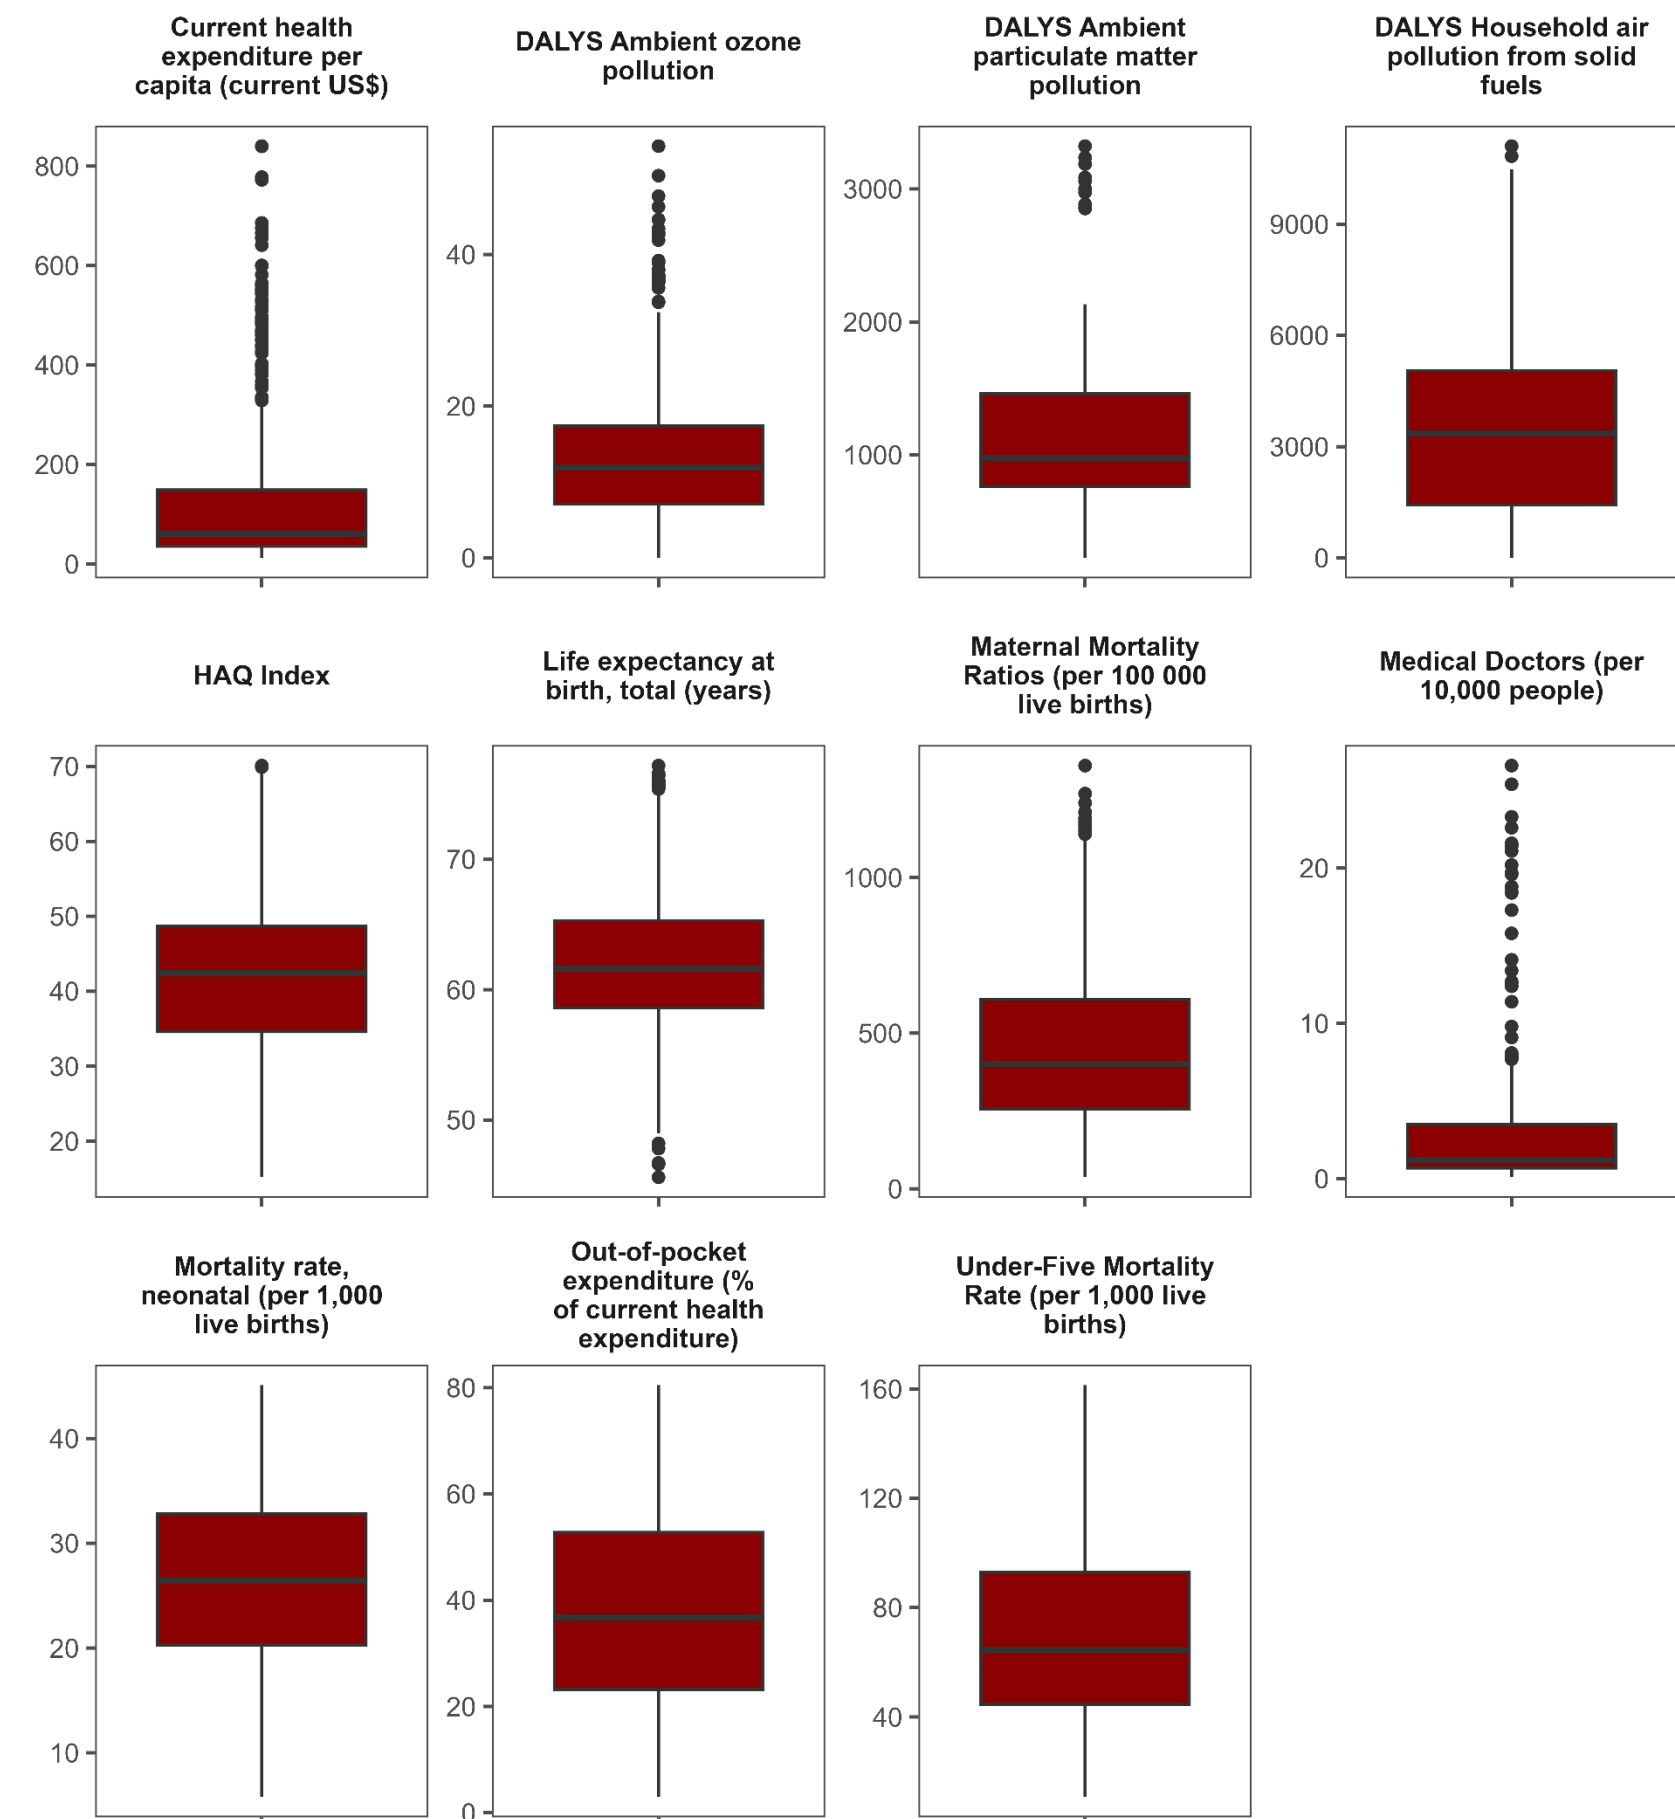

Context (1b)

30 countries scored above the average continental socioeconomic inclusion dimension score of 48.61

Context (1c) High health scores reflect high scores on underlying indicators:

- ❑ Healthcare access quality index (score above 50)
- ❑ above 72 years, high life expectancy at birth
- ❑ less than 12 disability-adjusted life years (DALYs) due to household air pollution from solid fuels; more than 7,000 DALYs in low-scoring countries;
- ❑ below 35% out-of-pocket expenditure /current health expenditure;
- ❑ above US\$233 current health expenditure per capita, compared <US\$40 in low-scoring countries.
- ❑ High number of medical doctors per 10,000 people.
- ❑ Fewer maternal mortality ratios, less than 72 per 100,000 live births, versus 800 per 100,000 in low-scoring countries.

Context (1d)

High out-of-pocket (OOP) health spending in Africa.

Countries by level of per capita current health expenditure (CHE), 2012–2020, WHO African Region

Question of sustainability?

Source: WHO Global Health Expenditure Database, 2022

Public Service Delivery is a Key Dimension of Governance Effectiveness

Evolution of Governance Indicators, 2015 - 2023

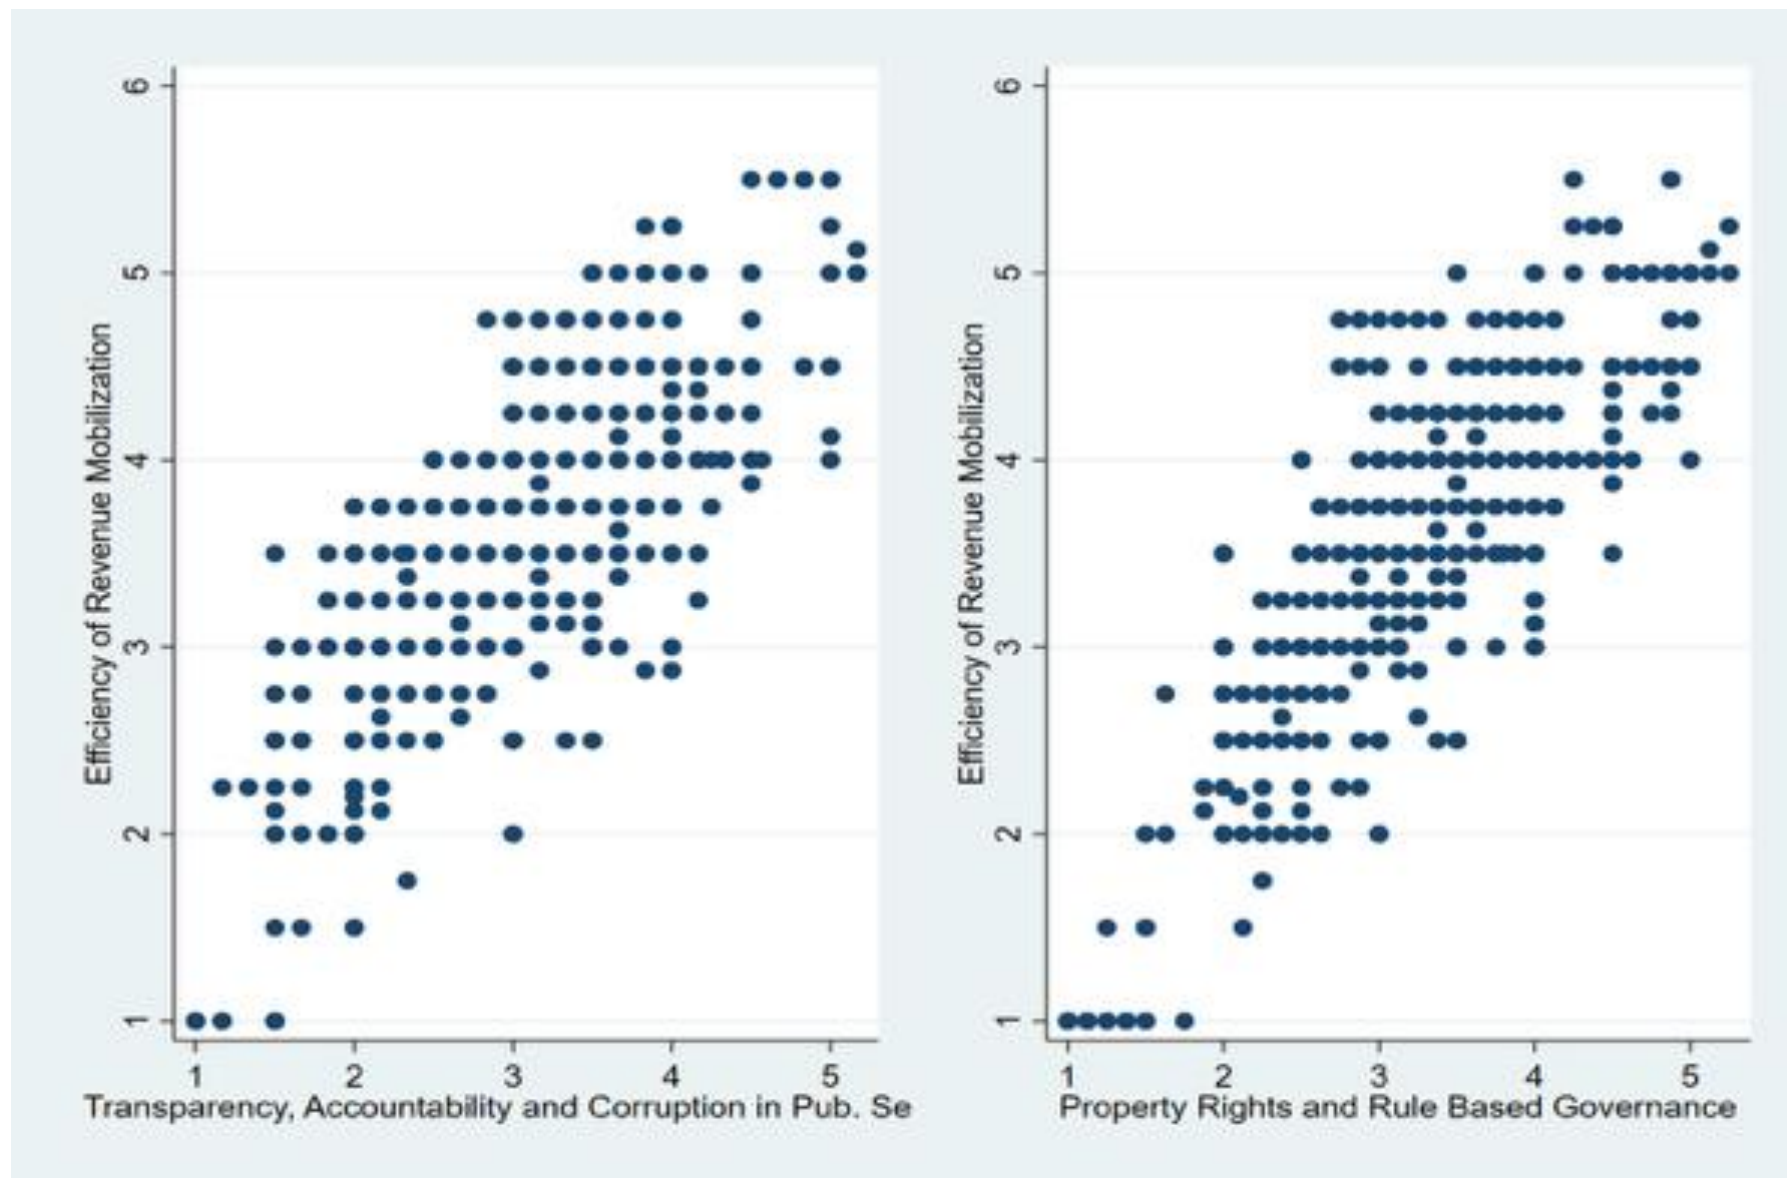

Africa with comparator regions, 2015 - 2023

Context (1f)

Governance Quality affects Resource Mobilization – Domestic and External- for a capable state / Capable public sector

Resource mobilisation and Governance indicators

01

Governance quality has direct implications on the efficiency of resource mobilization, both domestic and external.

02

Transparency, accountability, control of corruption, property rights, and governance improve domestic and foreign investments.

03

Market stability boosts resource mobilization and Investments

❑ Impacts the government's ability to transform sector, deliver services and development

Context (2)

Good news- Countries are adopting policy reforms to make the public service sector more

- ❑ Citizen-centered (responsive, participatory, transparent).
- ❑ Human-centered in approach - serve the needs of end-users and are socially constructed systems
- ❑ Efficient and accountable (reducing duplication).
- ❑ Inclusive and equitable (vulnerable groups benefit).
- ❑ Performance-driven (**focus on outcomes /value**: not just outputs/inputs)-.
- ❑ Adaptive, innovative, and results-oriented governance systems
- ❑ Central continent's governance effectiveness and driver of development
- ❑ Effective in delivering services that create a level playing field that enhances **opportunities, capabilities, and choices** to continually expand citizens' capacity to be productive and create the results they truly desire

Outline

Context: Why
/What
transformation

**Definition/
concepts**

PSDI–Centrality
to Public Sector
Transformation
Case of Kenya

Learning

- ✓ Look for divergence
- ✓ Act, learn, and plan at the same time (reflexivity)
- ✓ Use minimum specifications (simple rules)
- ✓ Work on multiple leverage points
- ✓ Be creative with opportunities at the boundaries
- ✓ Build on what emerges and grows

-
- ✓ Develop explicit plans, then act
 - ✓ Look for agreement & clear outcome
 - ✓ Limit types of approaches & actions (best practice is all that matters)
 - ✓ Set targets
 - ✓ Drive implementation
 - ✓ Routine, stability, and control are what matter most

Concepts

Public Sector Transformation- Energizing change

(What we want)
Vision, mission

*Gap – Energy for
change (drives to where
you want to be)*

(What we have/
Where we are)

A system is what it does, not what it says it does! How do we pivot?

Concepts

Build Foundation for Change – System synthesis

Vision, mission for the next decades, Agenda 2063/SDGs, National Development Agenda/goals

(What we want)

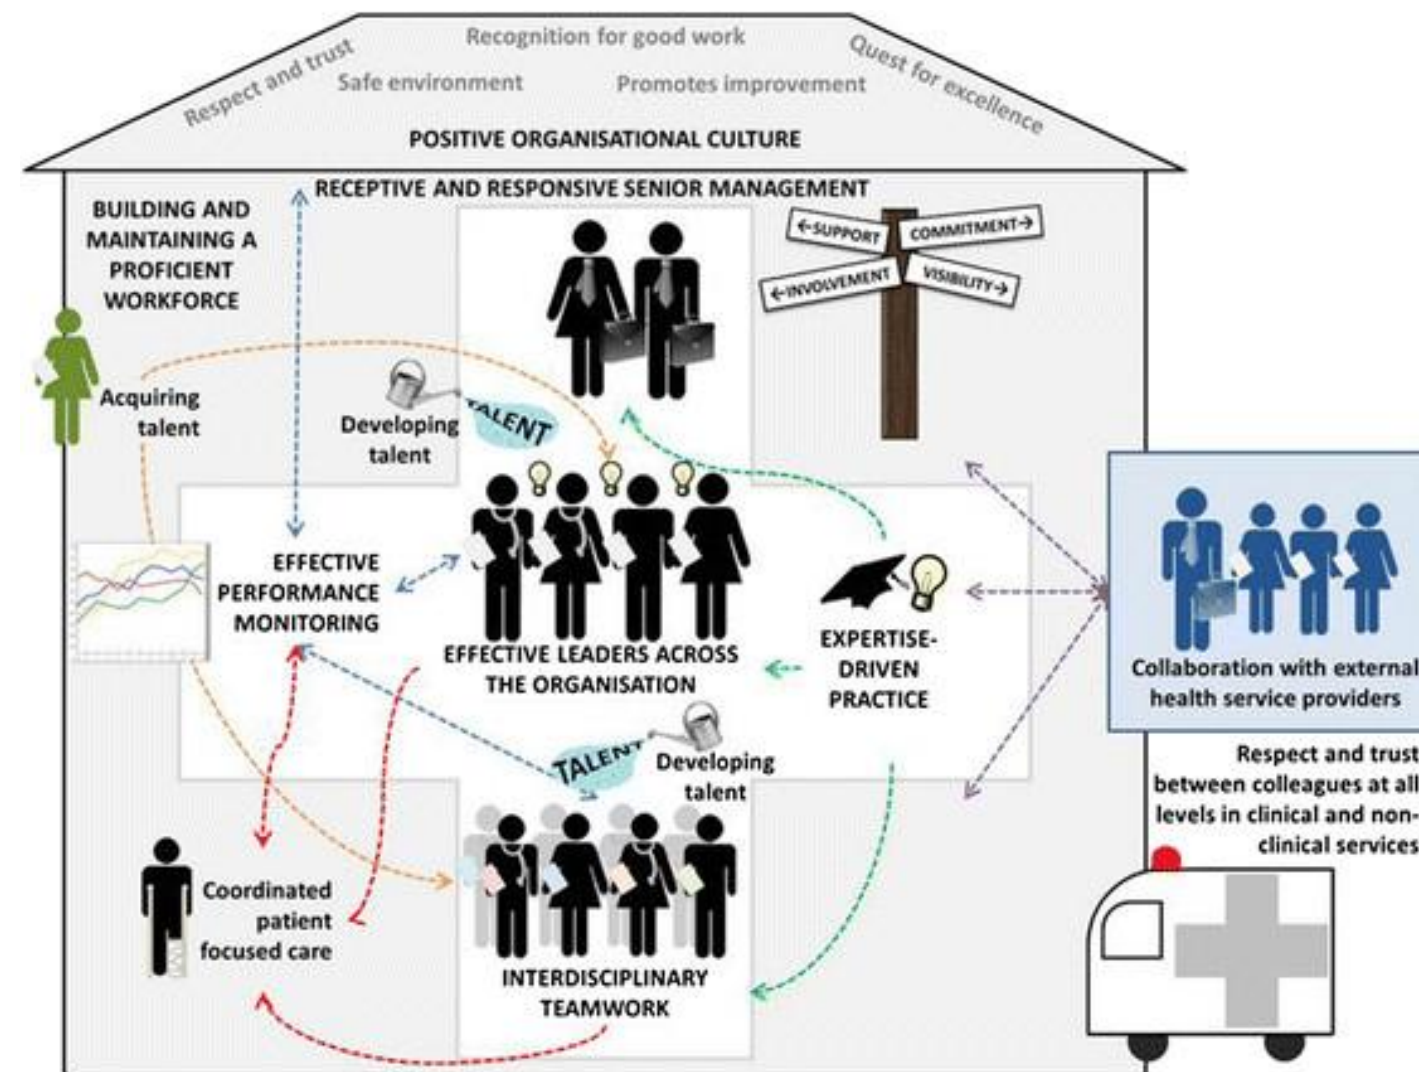

Stage 1

Building Foundation for Change:
Create stories of the future we want, change ideas for what we want, with a clear view of current systems

What we have

Broader context to which it belongs

Rich picture of high-performing hospitals: of the system landscape

Dialogue and collaboration: Facilitation techniques, active listening.

Concepts

Understanding and Acceptance of one's responsibility, alternatives

*Vision, mission for the next decades
, Agenda 2063/SDGs,
National Development
Agenda/goals*

Stage 1

Building Foundation
for Change:

*Create stories of the
future we want,
change ideas view of
current systems*

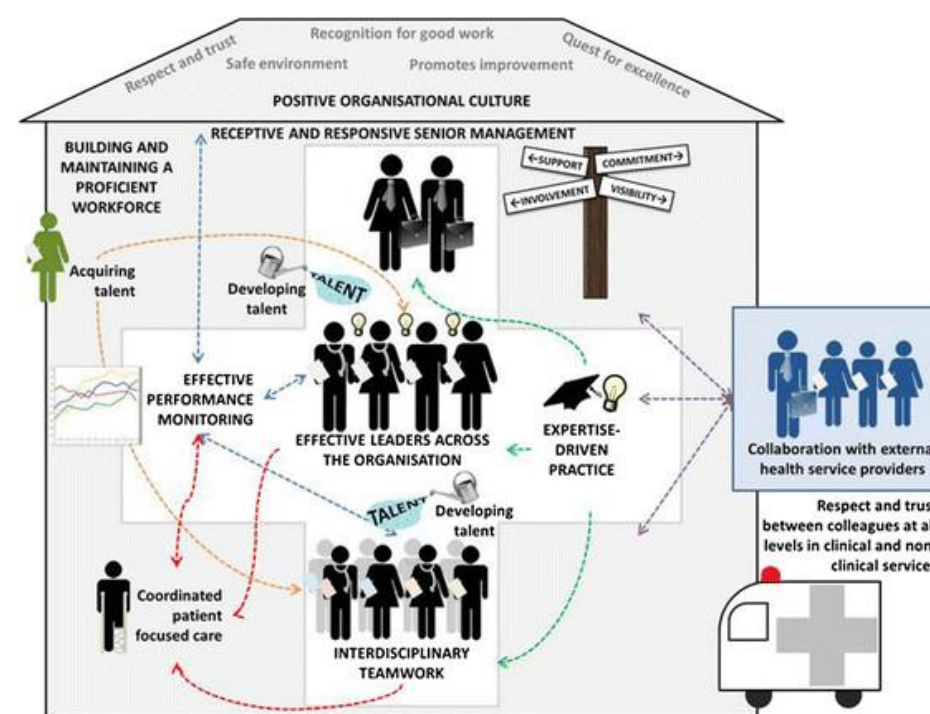

(What we want)

What we have

Stage 2

Facing Current Reality- (systems behaviour) -
*Understanding and
Acceptance of one's
responsibility, alternatives*

Example of policy
change

SHA

**Coordinated
patient
focused**

Better policies
& targeting

Uptake &
effective M&E
reporting

Effective
leaders,

**Quality
data**

VISIBLE

Events

Patterns
& trends

System structures
& drivers

Predominant social paradigm
(Mental models, worldviews)

RARELY SEEN

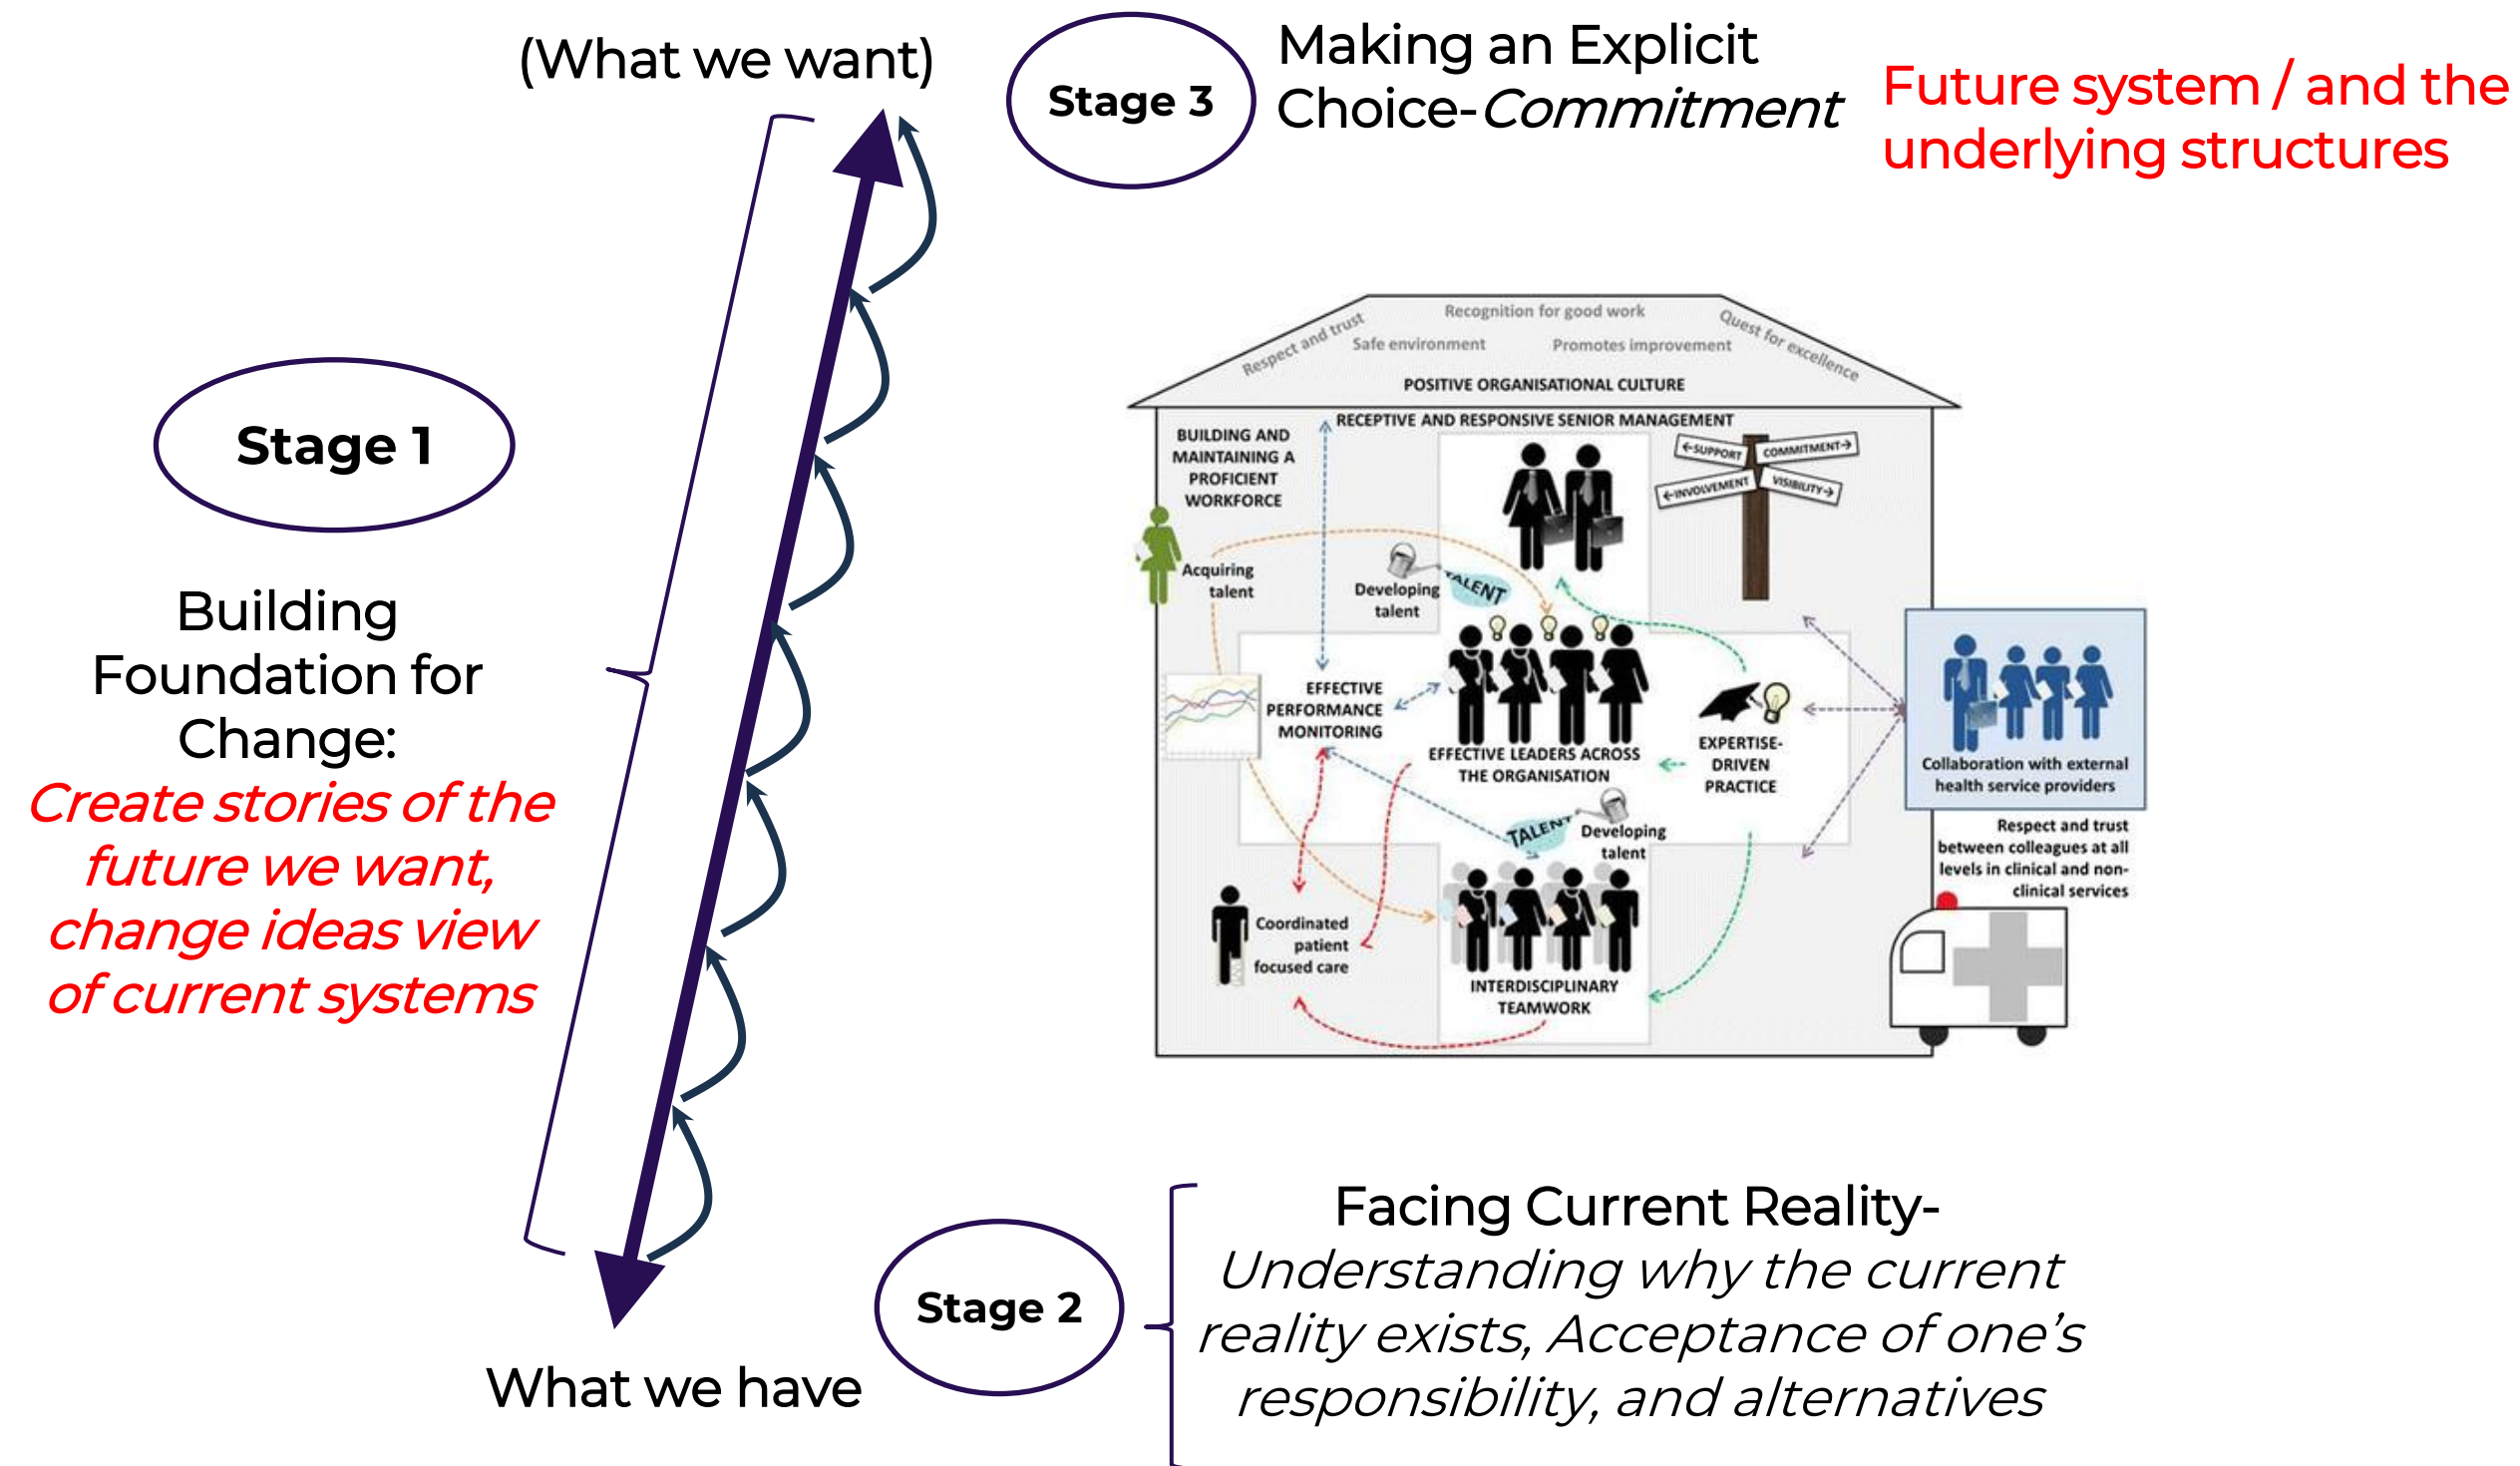

Transformational
change

**Explore poter
change ideas
Keep in mind
system mode**

Dialogue and collaboration

Concepts

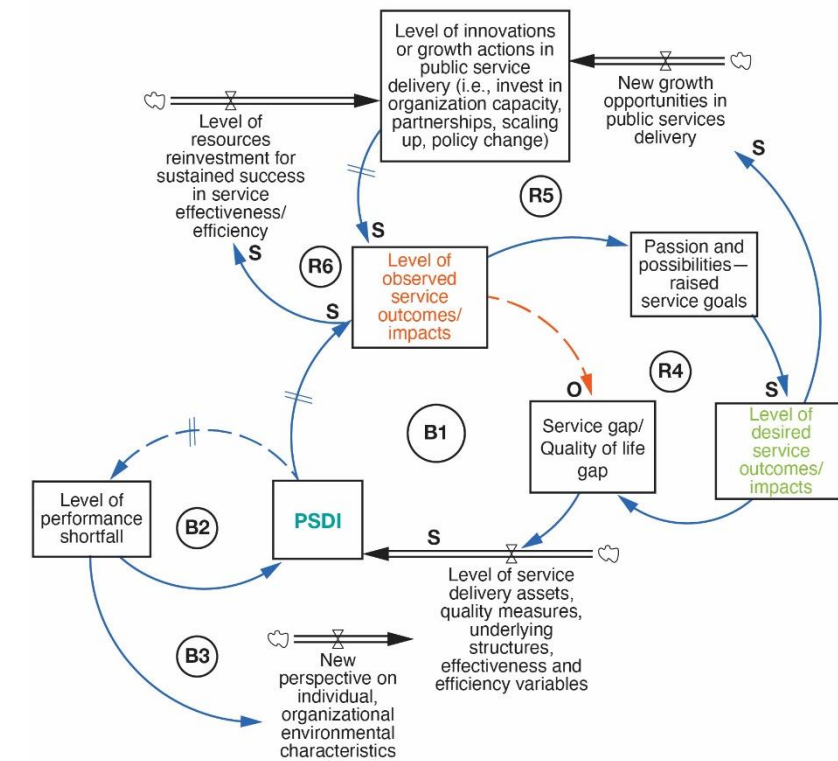

Making an Explicit Choice- Commitment or Model of the future system

Concepts

Transformations: Designing the solutions– prototypes, considering positive/negative effects of change ideas

FIGURE 35 PSDI as a diagnostic and learning tool to improve public services and their delivery

Design Thinking Process

(What we want)

Stage 3

Making an Explicit **Future system**
Choice-Commitment (Building the models)

Stage 1

Build Foundation for Change:

Create stories of the future we want, change ideas, and view of current/future systems

Stage 4

Close the gap: focus, momentum, and correction, with continuous *improvement*.
Identify activities, outcomes, assumptions, M&E plans, System (positive /negative effects

Tools: Systemic Theory of Change (STOC), test-to-fail, refine, scenarios, and feedback – *test potential (positive/negative) impacts of change ideas on different contexts/ possible futures.; iteratively prototype solutions based on the desired future, and scale small wins*

Stage 2

Facing Current Reality-
Understanding and Acceptance of one's responsibility, alternatives

What we have

Dialogue and collaboration:

outline

Introduction:

Definitions

PSDI & system tools for
Public Sector (health)
Transformation
Case of Kenya

Recommendations

KENYA Country
PSDI scores and
best score
comparison

Design system change ideas that deliver impacts by using the PSDI as **baselines** for checking outcomes and impacts over time

- ❑ **Shift Focus from Inputs to Outcomes:** The PSDI moves beyond conventional focus on inputs (budgets spent) and outputs (infrastructure built) by offering multi-dimensional performance and perception data.
- ❑ PSDI measures outcomes in alignment with the SDGs and AU Agenda 2063, such as poverty reduction, access to electricity, and food security
- ❑ Sector implementation units can link sector projects' performance to broader socioeconomic impacts
- ❑ Refarming M&E from project-completion metrics to citizen impact metrics, ensuring that investments translate into real changes in livelihoods.

Leveraging PSDI to create a resilient Public Service system

- ❑ PSDI: *Diagnostic metrics*. *Where we are* (scores by dimension, citizen perceptions).
- ❑ Define the transformation to *where you want to go*: *Specify* the causal pathways, assumptions, and intermediate outcomes to close the gap
- ❑ For example,
 - Use PSDI scores to set a **data-driven baseline** and prioritize the transformation target by picking PSDI dimensions with the largest gaps.
 - **Translate PSDI gaps into SMART GOALS** (target PSDI dimension scores + local KPIs + timeframe).
 - **Map causal pathways of change** (inputs → activities → outputs → outcomes → **PSDI change in 2 or 3 years**) and list assumptions and risks.
 - **Design interventions based on** expected impact, including feasibility and scalability.
 - **Identify indicators** (PSDI + **intermediate KPIs**) and the frequency of monitoring
 - Assess potential **positive (amplifiers)** and **negative (stabilizers)** effects and adapt interventions for continuous learning.

Leveraging PSDI to create a resilient Public Service system by

Amplifying Change

❑ Digital Inclusion → Usage → Economic Activity → Revenue → Reinvestment → Digital Inclusion

More connectivity → more users → higher transactional volume → more local economic activity → higher government revenue (or private investment) → more funds to invest in connectivity → more inclusion.

❑ Better Service Delivery → Citizen Trust → Higher Uptake & Compliance → Better Data → Better Policy

When services improve, trust increases, and more citizens engage (by accessing and reporting problems), generating data that further enhances policy design and service quality..

Slowing or stabilizing systems change.

❑ Scale Faster → Capacity Gap (skills /technology) → Service Quality ↓ → Uptake ↓

The rapid rollout of change without adequate capacity building erodes quality, lowering service uptake and reversing gains.

❑ Digitization → Trust Concerns → Regulatory Backlash or Adoption Resistance → Slowdown

Weak digital governance, Insufficient data protection, and limited participatory engagement can create resistance, leading to slowdowns or policy reversals

Design public sector interventions that strengthen positive effects while negative effects are likely to block progress..

Kenya case :

Improving PSDI Socio-Economic Inclusion

I. Establish baselines (PSDI scores)

- ❑ Example: Use PSDI country numbers i.e., PSDI inclusion = 38.6 (low), infrastructure ~60.6, other sub-dimension scores
- ❑ Observations: weak rural inclusion and low digital access for women and remote counties. Strong urban e-services

II. Set SMART Goal tied to budget and ministerial KPIs

- ❑ Raise Kenya's PSDI Socio-Economic Inclusion score from 38.6 → 60 by 2030;
- ❑ To simultaneously increase county broadband coverage to 80% and women's digital service access to 70%.

The pathway to change assumes inclusion is the priority gap

Kenya Identify activities, outcomes, assumptions, and M&E plans

III. Pathway for change

- ❑ **Inputs:** budget allocation + multiyear financing; policy reforms; technical assistance; private sector partnerships
- ❑ **Activities:** last-mile broadband rollouts; **mobile-first e-service design**; subsidized device programs (open- source systems) ; public servant digital training; **data protection law enforcement**; county-level Huduma **digital hubs**. **Balance technology with human skills**
- ❑ **Outputs:** connection points built; number of public services online; % of trained civil servants; number of subsidized devices distributed
- ❑ **Outcomes (intermediate):** increased digital access in rural households; higher use of e-services by women & marginalized groups; shorter service turnaround times
- ❑ **Impact on PSDI:** observed increase in inclusion sub-dimension scores; improved citizen satisfaction.

Assumptions: Affordable energy supply for connectivity, political championing, private sector willingness to co-invest, and citizen trust improved via transparency measures.

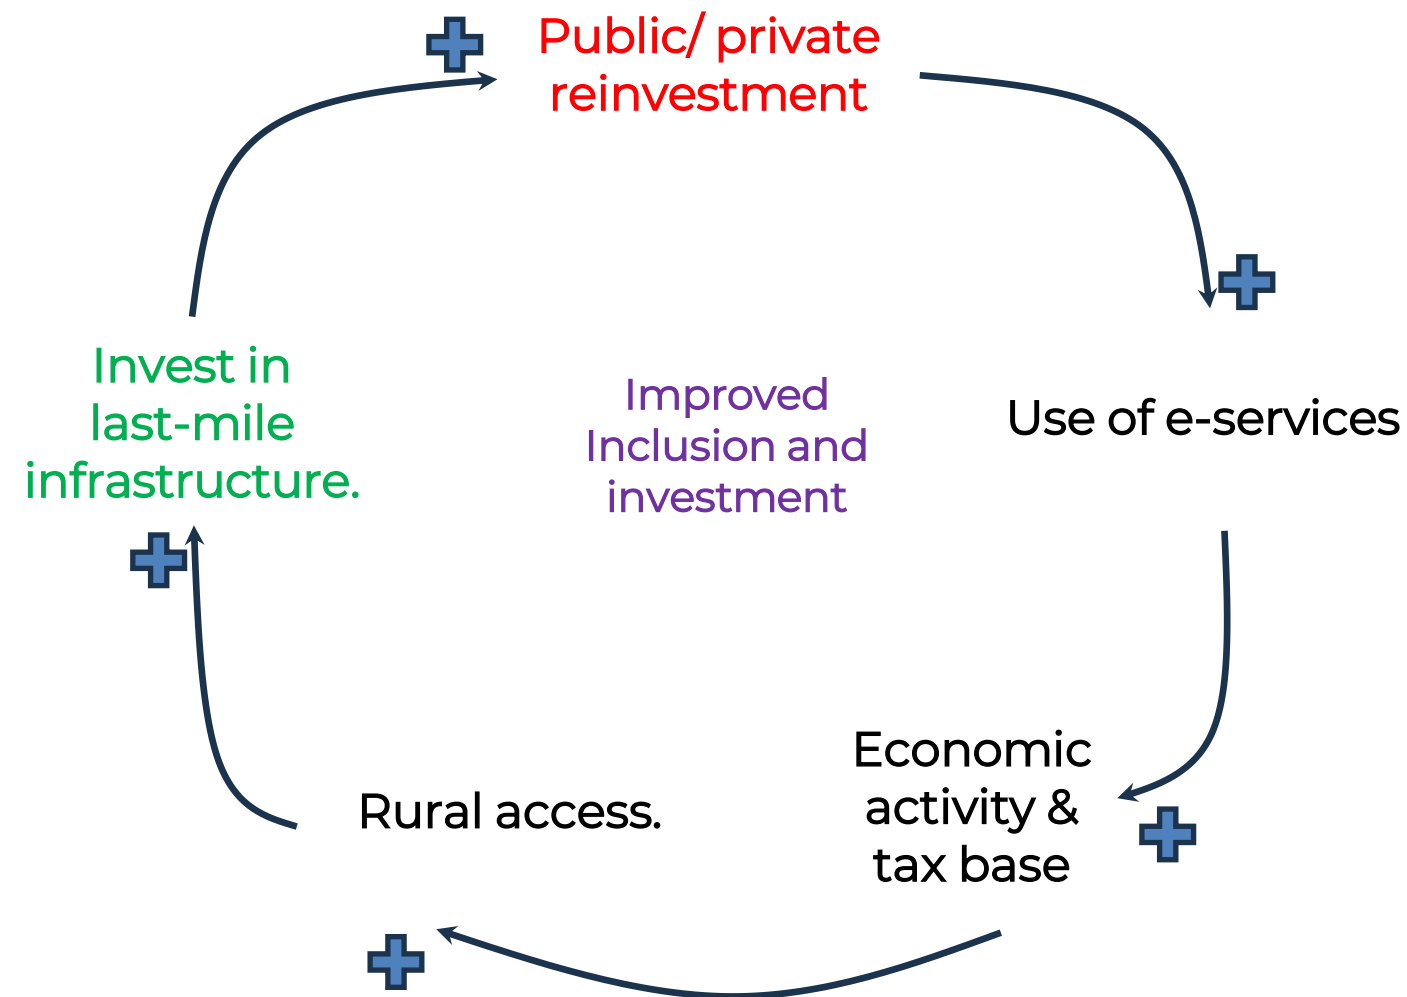

- ❑ **Last-mile broadband + solar micro-grids** in 20 most underserved counties. (*addresses infrastructure & access*)
- ❑ **Mobile-first Huduma Mashinani expansion:** prioritize agricultural extension, birth registration, cash transfers via USSD + apps. (*addresses access & inclusion*)
- ❑ **Women's Digital Inclusion through a support system** (i.e., device + training + data subsidy pilot in 5 counties). (*addresses gender gap*)
- ❑ **A Public sector Digital Capacity Academy:** train 10,000 civil servants in digital service design and data management. (*mitigates capacity negative feedback; scaling up technology needs to go hand in hand with capacity development, and digital governance*)
- ❑ **Data protection + Citizen Feedback Platform:** ensure to publish service delivery metrics and open channels for complaints; pass/enforce strong privacy rules. (*builds trust, reduces backlash*)

V. Baseline PSDI and intermediate KPIs

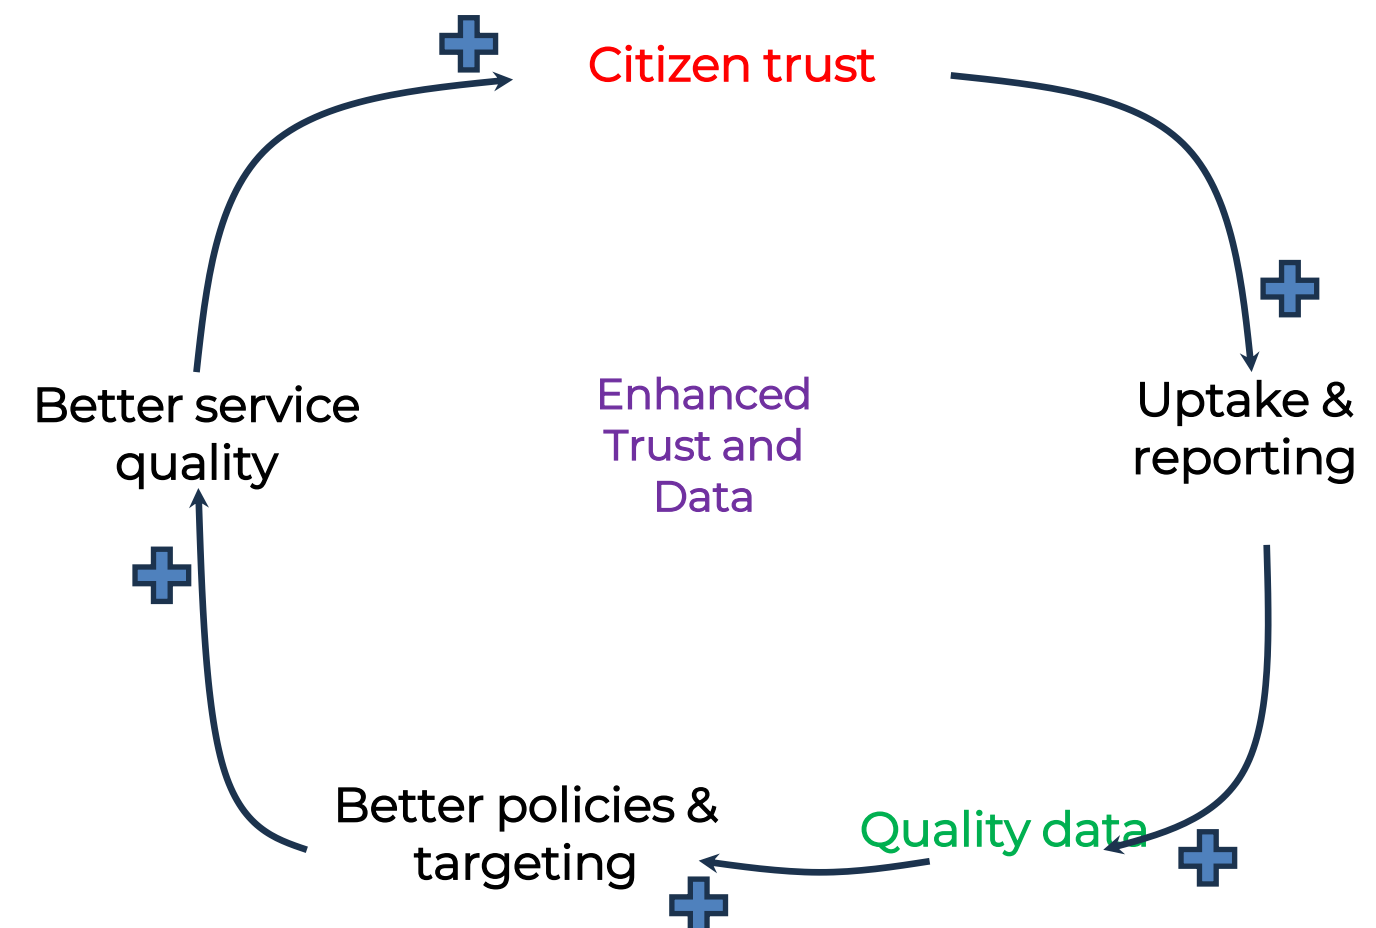

- ❑ Baselines /targets using PSDI: Inclusion dimension and subdimensions (annual).
- ❑ Define Intermediate KPIs (quarterly/biannual):
 - % households (rural) with broadband access (county disaggregation).
 - % women who used at least one e-government service in the last 12 months.
 - Average turnaround time for five priority services.
 - civil servants certified by Digital Capacity Academy
 - Number of complaints and resolution rate (trust metric).
- ❑ Sustainability and finance KPIs:
 - ❑ % co-finance received from the private sector- public-private partnerships;
 - ❑ Service cost per connected household
 - ❑ System funding secured.

Kenya

Amplifying trust and inclusion through investments in last-mile and improved data quality respectively

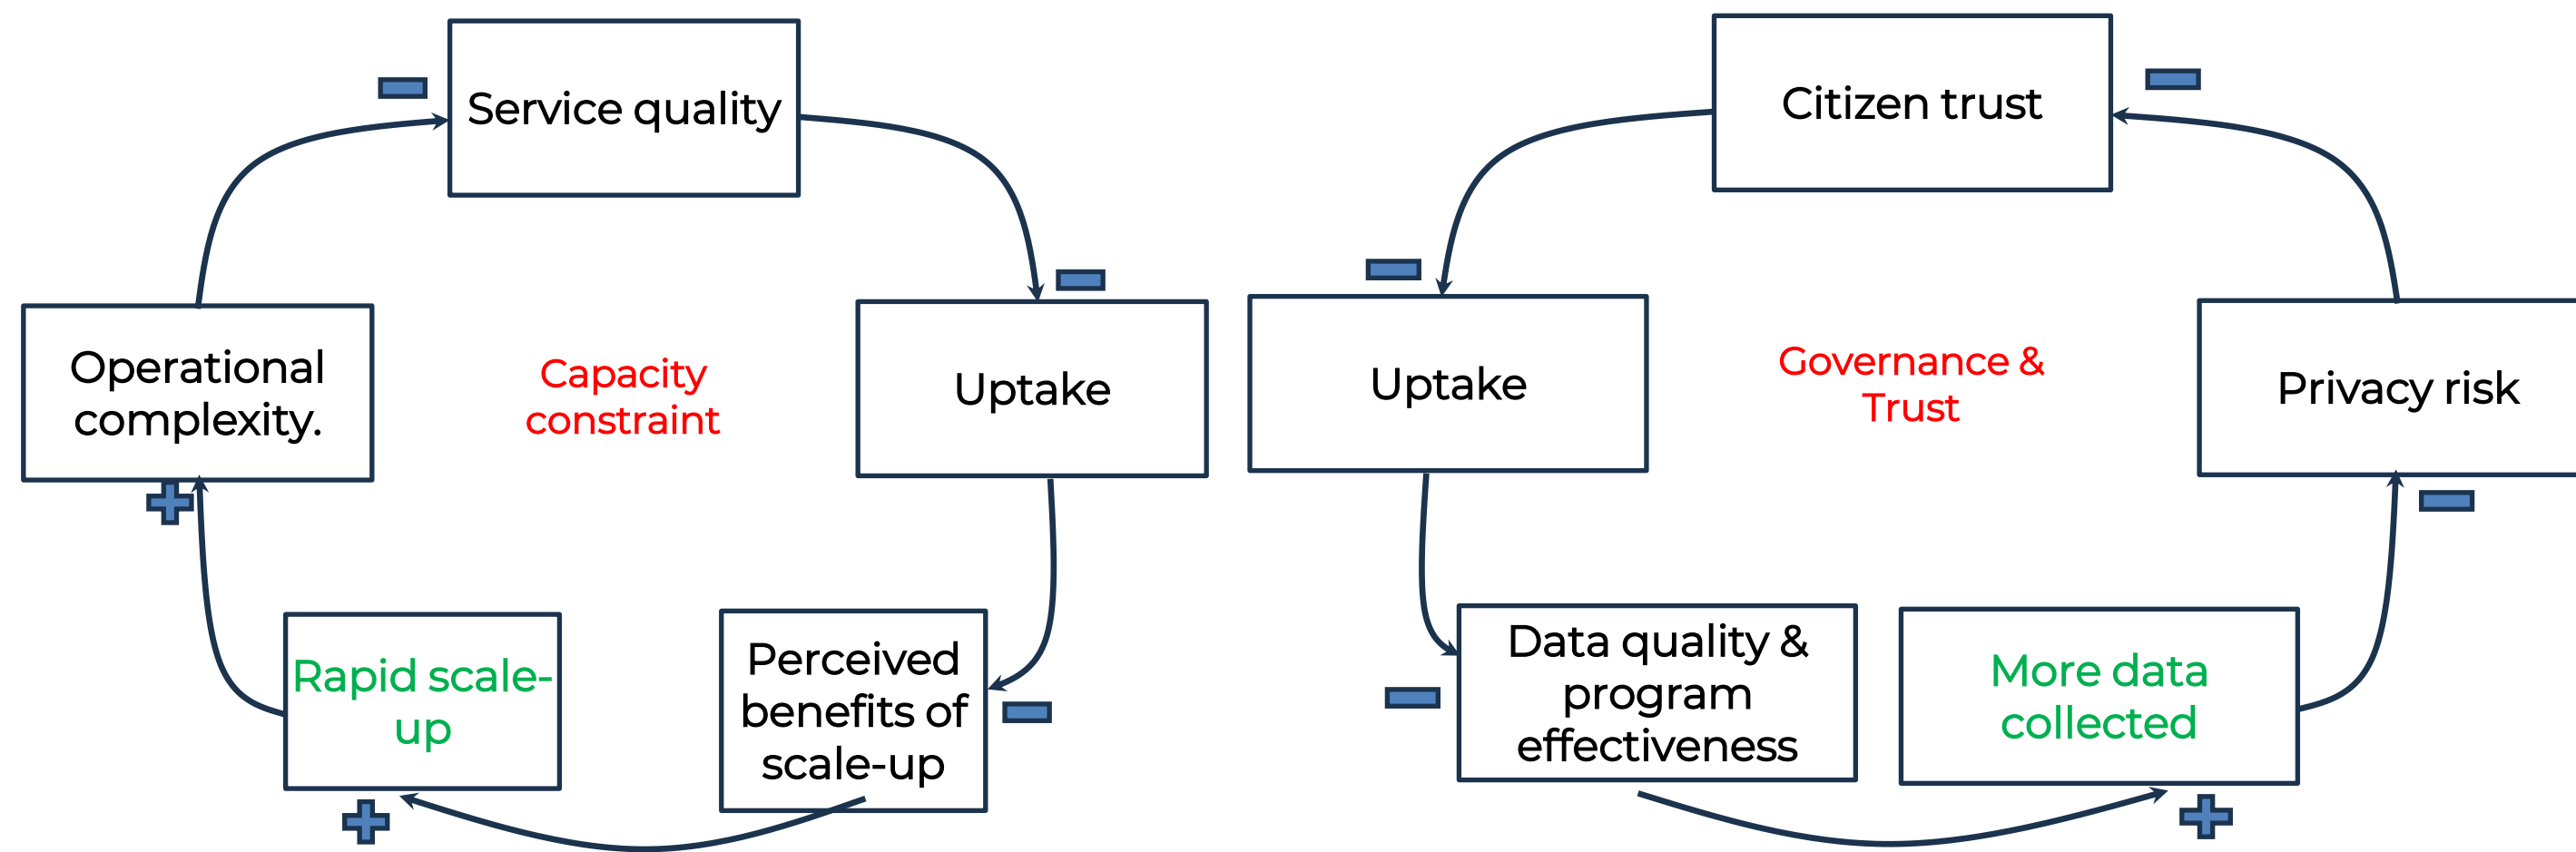

Action: work with MDBs to de-risk private investment early (guarantees, blended finance) to speed reinforcement and investment in infrastructure

Action: Share data publicly, showcase quick wins i.e. reduced time to issue ID and promote them to foster trust.

Kenya

Constraining changes – impact of rapid scale-up with capacity constraints and more data collection without data Governance

Solution: Build Digital Capacity Academy where possible, plus phased rollouts, service-level agreements, and monitoring.

Solution: Adopt data protection laws, independent oversight, and accessible grievance redress mechanisms.

- ❑ Quarterly dashboard to highlight PSDI trends and intermediate KPIs; flag counties that deviate.
- ❑ Rapid learning cycles: every 6 months,
 - (a) analyze dashboard results,
 - (b) surface assumptions failures,
 - (c) adapt interventions (reallocate funds to counties with high ROI).
- ❑ **Governance:** create a national **Digital Transformation Steering Committee** with county reps, the private sector, and civil society.
- ❑ where politically feasible, link PSDI targets to ministerial performance contracts

Public Sector
Transformation
Case of Kenya

04

Conclusions

Conclusion

- The PSDI provides a holistic data-driven assessment of public services in five dimensions and nineteen subdimensions.
- PSDI is a diagnostic and learning tool for improving public services and their delivery
- Index scores can guide pipeline investments by the African Development Bank Group, development partners, and RMC governments.
- The PSDI will serve as a key tool to enhance public service delivery through its wide dissemination and the launch of the Public Service Delivery Awards at continental, regional, and national levels.

Conclusion: Illustrative Practical Actions to leverage PSDI

- Adopting PSDI indicators as a baseline in national M&E policy and sector projects frameworks
- Localizing targets using PSDI performance gaps to set realistic, measurable goals:
- Training M&E officers in interpreting composite indices and perception survey data
- Institutionalizing peer learning platforms across dimensions and countries
- Track cross-sector indicators rather than siloed metrics.
- Design **multi-sectoral interventions or forge inter-ministerial partnerships during planning**. For example, an agro-industrial park project could integrate energy supply, transport links, and water access rather than treating them as separate initiatives. This aligns with results-based management (RBM) principles, where outcomes are maximized by addressing **interconnected bottlenecks**

More on PSDI Framework and Methods

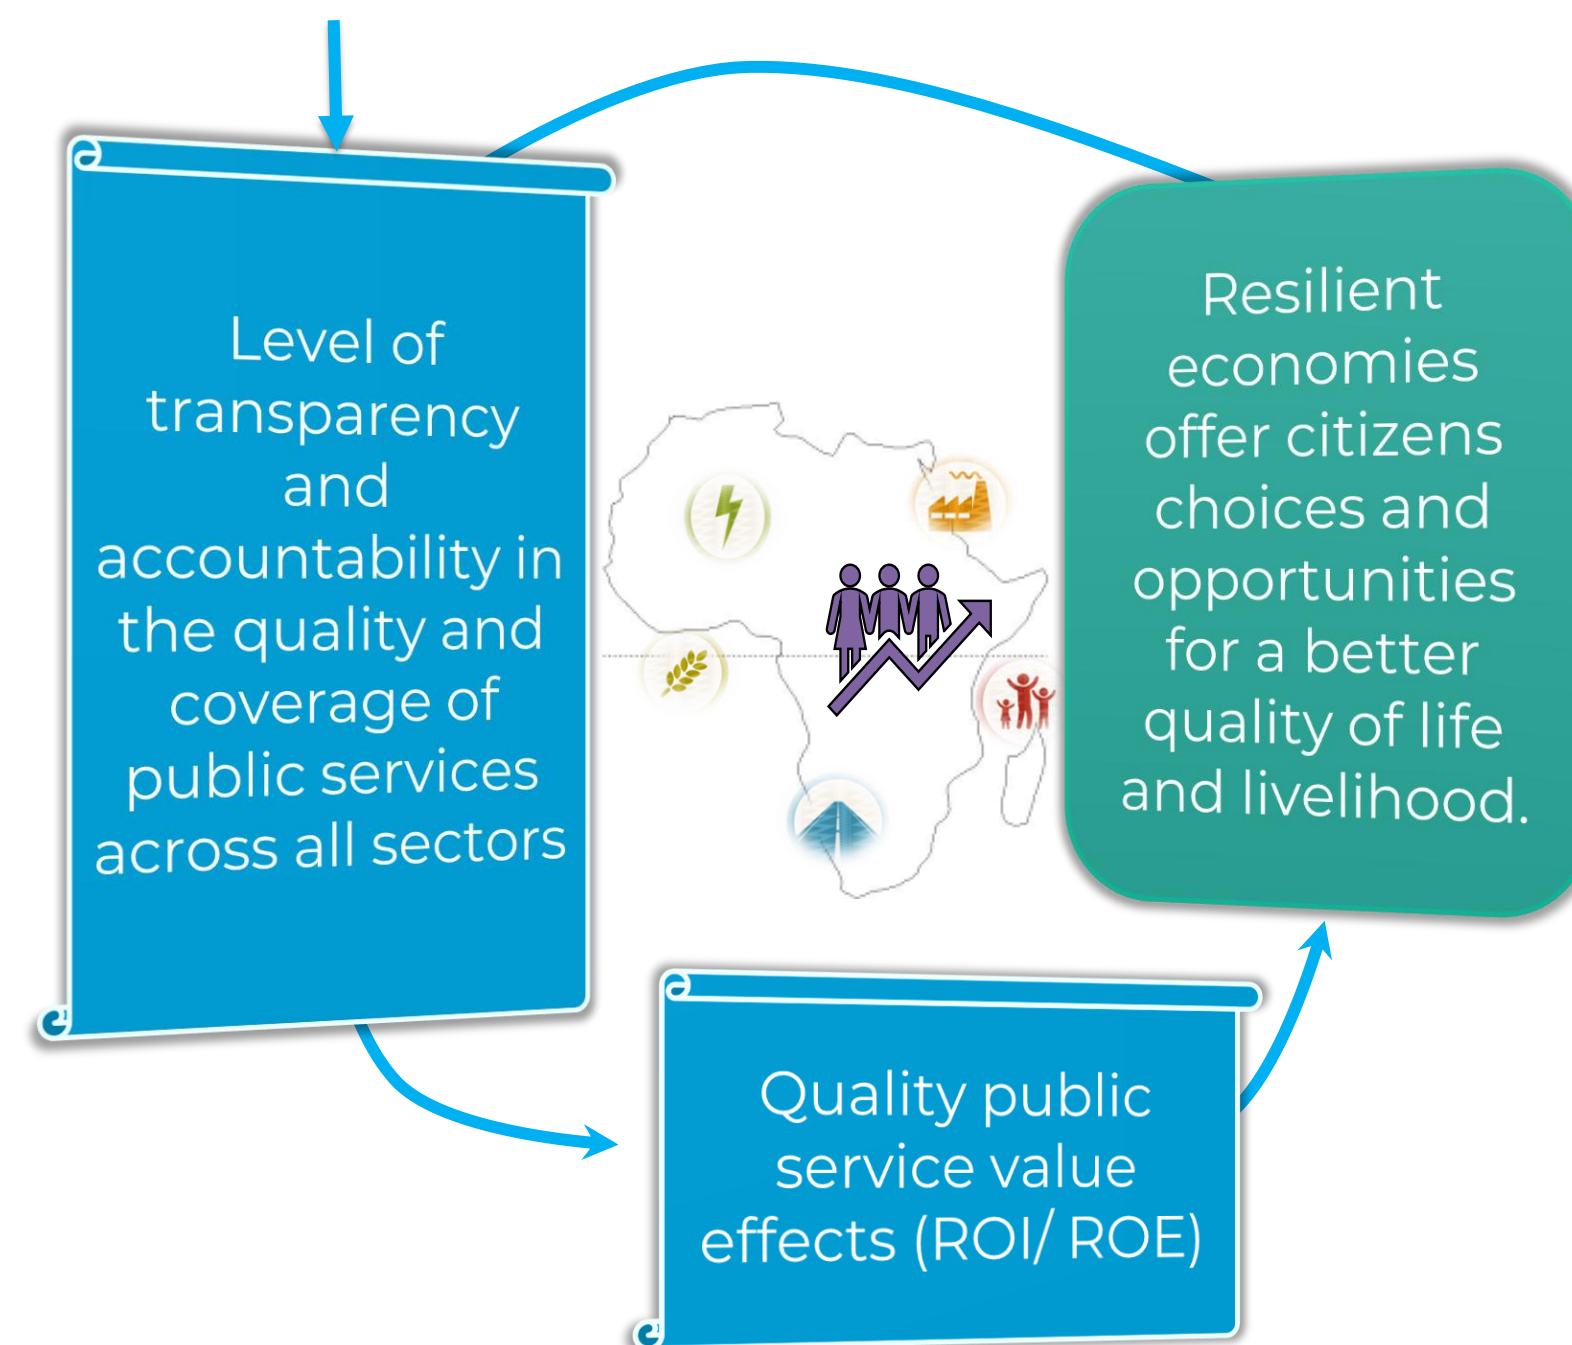

Lack of comprehensive measures of Service delivery performance

- 02 Governance indicators track election behaviour or select service sectors, generating attention to policy issues and driving actions to achieve set development goals.
- 03 World Bank service delivery index: Education and Health; the B-Ready Report
- 04 African Development Bank has sector-based indexes (Electricity, integration, industrialisation)
- 05 All limited in coverage, offer inference on quality of service as defined by experts, no measure of citizen satisfaction with services.
- 06 No comprehensive indicator to monitor progress on the delivery of public services for Africa's Agenda 2063 and the SDGs in Africa, that accounts for citizen's perceptions and experience across all sectors

to a comprehensive metric:

The Public Service Delivery Index in Africa (PSDI) ...raises the

Key takeaways from PSDI for projects

PSDI significantly contributes to assessing context for project readiness in addressing critical needs, identifying priority countries and sectors, and informing policy-based operations

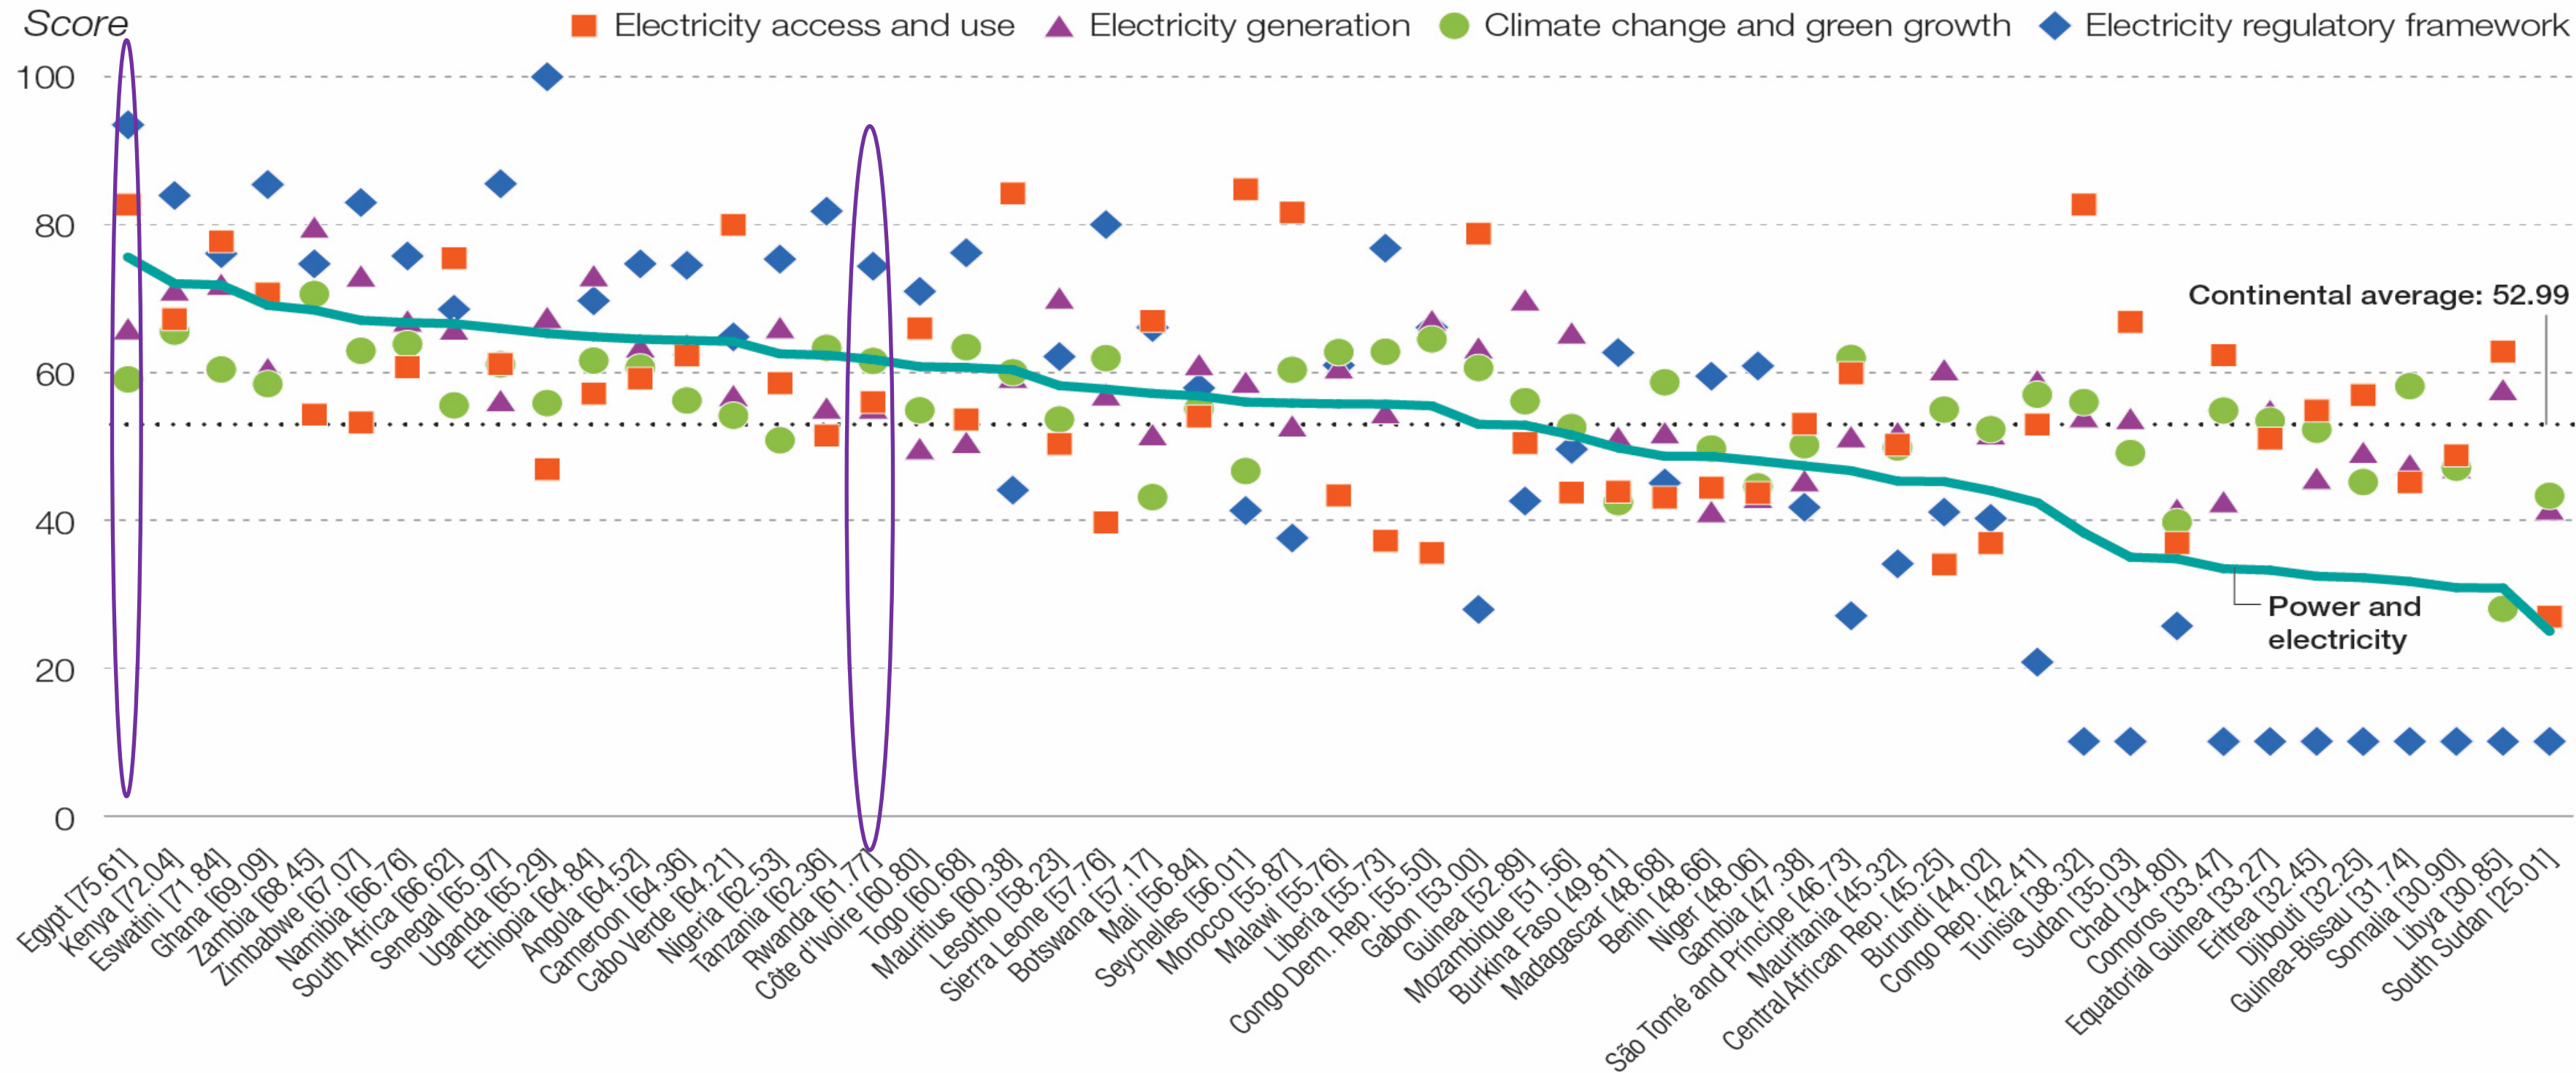

PSDI Perception Scores (ROE)

- Moderate household satisfaction overall, with 35 countries achieving scores of 50 and above scores

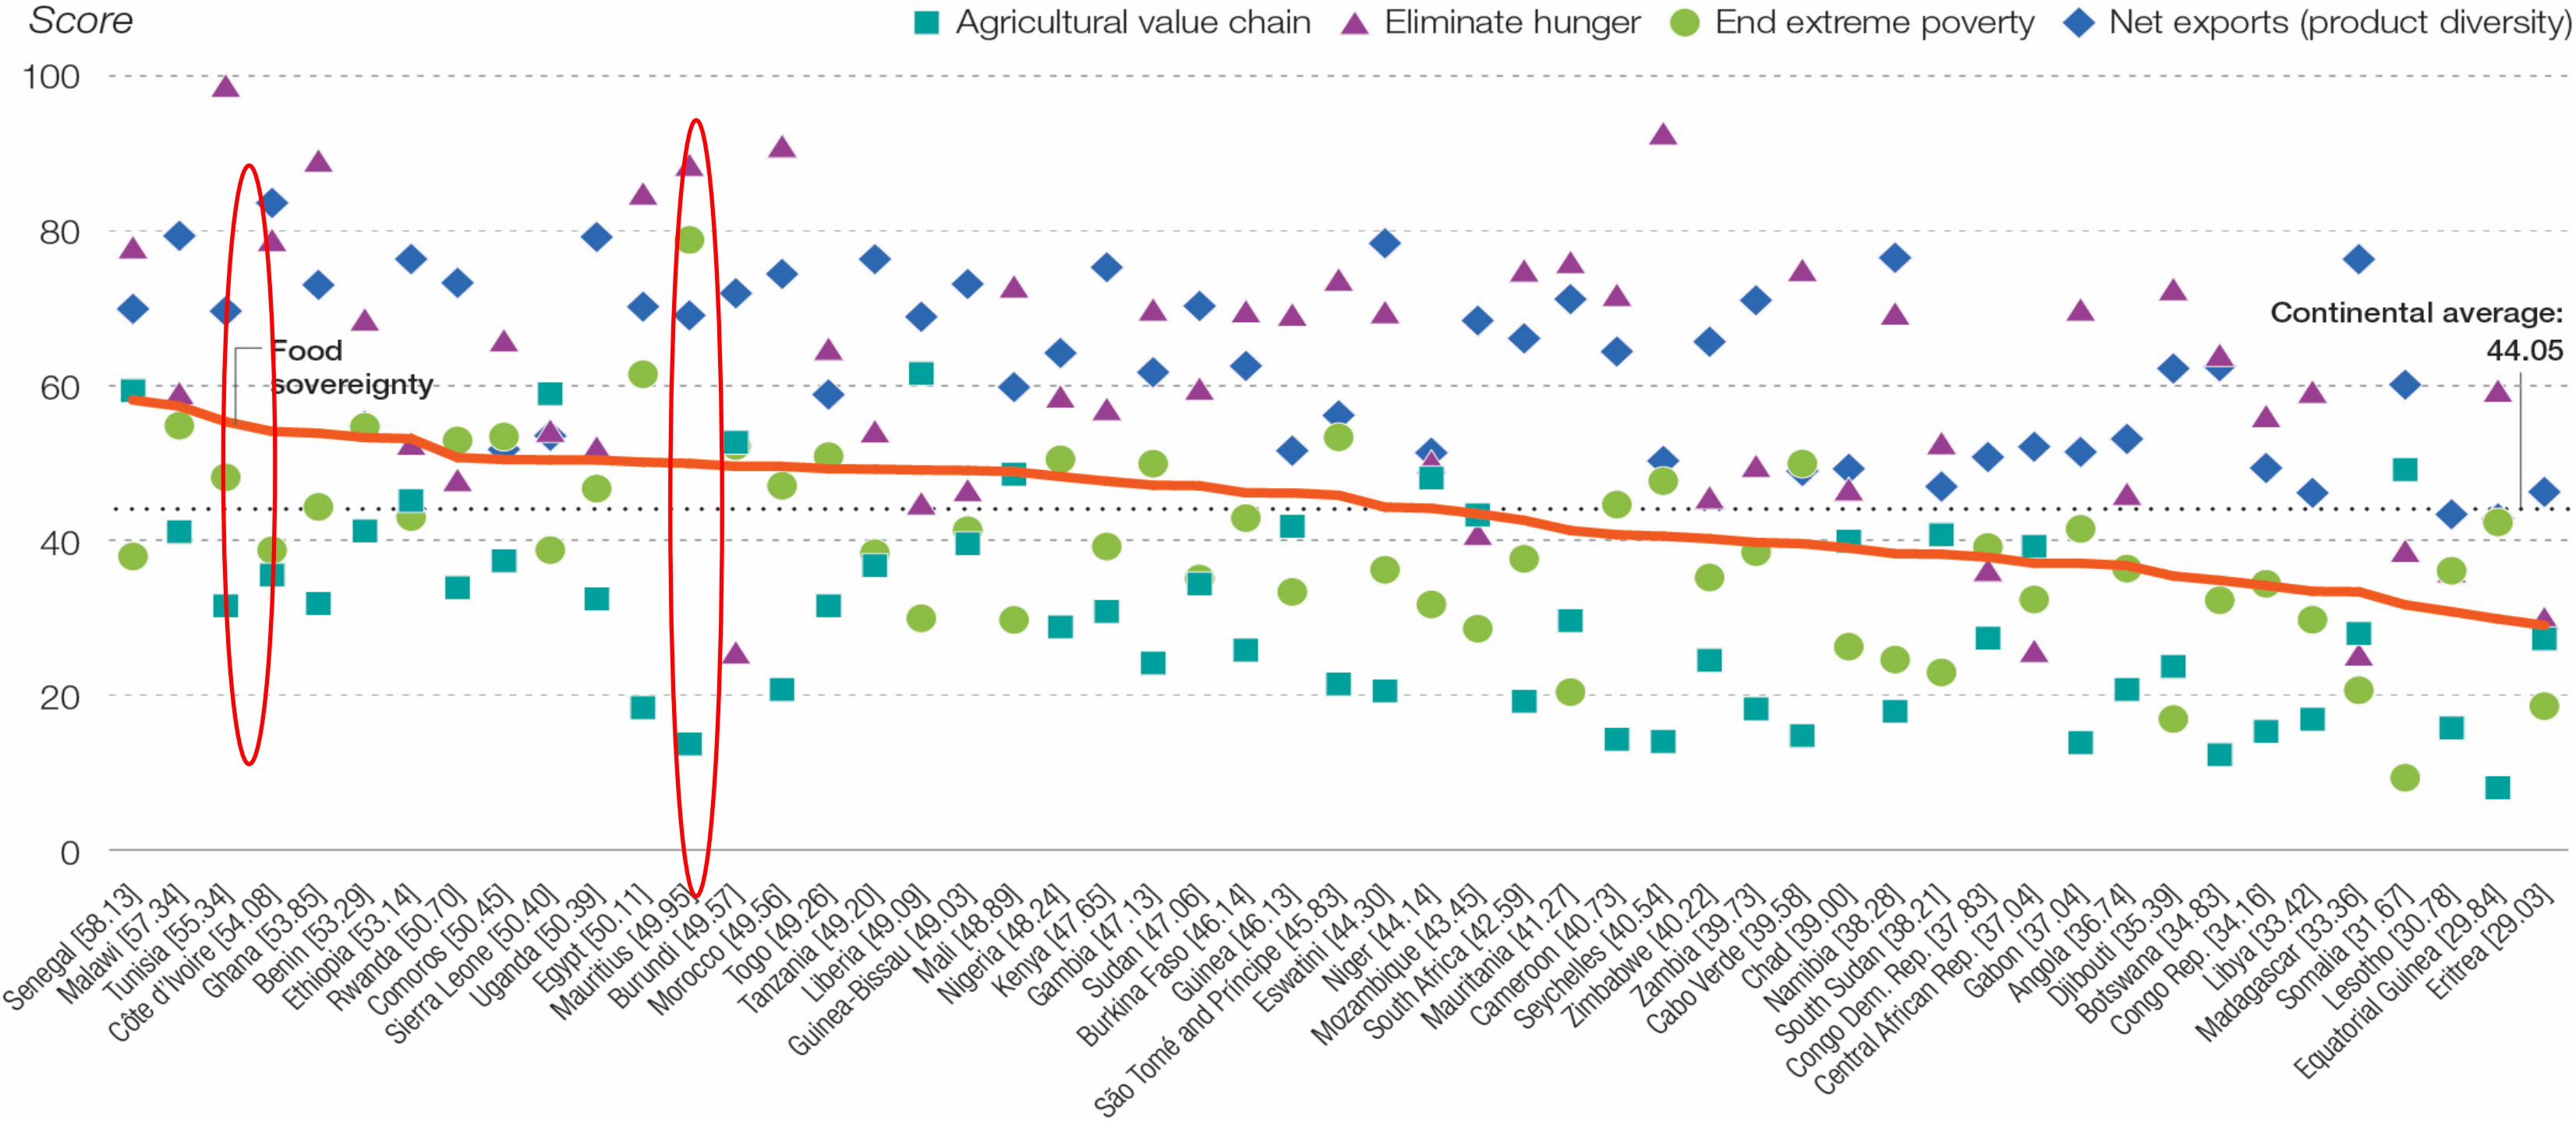

Where to target for the power and electricity dimension

30 countries scored above the average continental score of 52.99

39 countries scored above the average continental food sovereignty score of 44.05

30 countries scored above the average continental regional Integration dimension score of 44.65
